THE INQUIRY MODEL

Is about ...

A type of instructional strategy that encourages students to critically examine how the world works by asking questions and then developing and implementing systematic approaches for answering those questions.

So what? What is important to understand about this?

As someone who studied science and looks forward to teaching it, I will use this method as often as possible. I think it would be beneficial to teach the steps of the scientific method and then focus on how it is applied to everyday things in asking questions. What I like, as well, about this method is that it can be applied to non-scientific questions. It is really about a way of thinking, of analyzing a problem, of organizing thoughts & information. These are great skills for every student to learn.
